ANALYSIS AND FORECASTING OF AIR TEMPERATURE ANOMALIES FOR THE SPRING MONTHS.
tr. by T. C. Marwick. 11 Jan 60, 43p. (2 tables,
14 figs., omitted) 7 refs. Trans. no. 28; M1474.
Order from LC or SLA mi\$3.30, ph\$7.80 61-1854)

Trans. of Tsentral'nyyj Inst[itut] Prognozov
Moscow. Trudy (USSR) 1958, no. 71, p. 78-113.

A study of synoptic charts from 1891 to 1950, contour charts of isobaric surfaces from 1938 to 1950, charts of the mean-monthly distribution of temperature and its deviations from normal, data on the air temperature transition through 0° and $+5^{\circ}$ from 1891 to 1951, and data on the disappearance of the stable snow cover from 1938 to 1949 showed a clear connection between the macro processes of a winter season and of the spring season immediately following it. (a) If, in the majority of the months in a winter season, typical macro processes take place, then they will usually, (Earth Sciences--Meteorology, TT, v. 5, no. 6).
